## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 16 recites the limitation "network icon" in claim 16(a). There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Objections***

Claim 16 is objected to because of the following informalities: The structure of the claim is inappropriate. See MPEP for proper structuring of claims. Appropriate correction is required.

### ***Claim Rejections - 35 USC §101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requires of this title.

Claims 16,17 and 18 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claims amount to nothing more than nonfunctional language and provide no useful, concrete or tangible result.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Paltenghe et al. (US 2001/0011250) in view of Official Notice.

In regards to claims 1-18, Paltenghe et al discloses all of the features of the instant claims, except as follows. Paltenghe teaches a centrally located data center that stores critical information regarding a buyer. This information may be accessed to consummate sales from remote locations over the Internet using a plurality of communication devices. Paltenghe, however, does not specifically mention currency conversion. Currency conversion over the Internet is old and well known in the art. It would have been obvious to a person of ordinary skill in the art to include in Paltenghe the currency conversion features as taught by the instant claims, because this would allow the user to conduct business world wide and thus create increased business for the central processing owners.

Paltenghe also does not specifically mention the plethora of recognition techniques and secure identification techniques of the instant application. It is old and well known in the art to use securing, encrypting and identification techniques such as

those in the instant claims to assure that the party accessing and using the information is positively identified. It would be obvious to a person of ordinary skill in the art to include in Paltenghe, the securing, encrypting and identification techniques such as those in the instant claims, because this would prevent others from accessing the person's account and using their money to purchase products for themselves.

Paltenghe further does not specifically mention the process outlined in claims 16-18 for accessing the network and processing a transaction. It is old and well known in the art at the time of the invention to conduct transactions in the manner described in the instant claims. It would be obvious to a person of ordinary skill in the art to include in Paltenghe the process as taught by the instant claims because this would provide a means for conducting a transaction and paying the bill, which is important to both the buyer and the seller to consummate the sale.

It appears that the applicant in this application is a *pro se* applicant (an inventor filing the application alone without the benefit of a Patent Attorney or Agent). Applicant may not be aware of the preferred methods of ensuring timely filing of responses to communications from the Office and may wish to consider using the Certificate of Mailing or the Certificate of Transmission procedures outlined below.

#### **CERTIFICATE OF MAILING**

To ensure that the Applicant's mailed response is considered timely filed, it is advisable to include a "certificate of mailing" on at least one page (preferably on the first page) of the response. This "certificate" should consist of the following statement:

I hereby certify that this correspondence is being deposited with the United States Postal Service as first class mail in an envelope addressed to: "Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450" on (date).

(Typed or printed name of the person signing this certificate)

(signature)

#### **CERTIFICATE OF TRANSMISSION**

Alternatively, if applicant wishes to respond by facsimile rather than by mail, another method to ensure that the Applicant's response is considered timely filed, is to include a "certificate of transmission" on at least one page (preferably on the first page) of the response. This method should be used by foreign applicants without access to the U.S. Postal Service. This "certificate" should consist of the following statement:

I hereby certify that this correspondence is being facsimile transmitted to the United States Patent and Trademark Office, Fax No. (703) \_\_\_\_ - \_\_\_\_ on (date).

(Typed or printed name of the person signing this certificate)

(signature)

These "Certificates" may appear anywhere on the page, and may be handwritten or typed. They must be signed, and the date must be the actual date on which it is mailed or transmitted. For the purpose of calculating extensions of time, the date shown on the certificate will be construed as the date on which the paper was received by the Office, regardless of the date the U.S. Postal Service actually delivers the response, or the fax is "date-stamped" in. In this way, postal or transmission delays do not affect the extension-of-time fee.

In the event that a communication is not received by the Office, applicant's submission of a copy of the previously mailed or transmitted correspondence showing the **originally** signed Certificate of Mailing or Transmission statement thereon, along with a statement from the person signing the statement which attests to the timely mailing or transmitting of the correspondence, would be sufficient evidence to entitle the applicant to the mailing or transmission date of the correspondence as listed on the Certificate of Mailing or Transmission, respectively.

**NOTICE TO APPLICANT:** In the case of lost or late responses the use of other "receipt producing" forms of mailing a correspondence to the Patent Office, such as Certified Mail, or a private shipper such as FedEx, **WILL NOT** result in the applicant getting the benefit of the mailing date on such receipts. These receipts are not considered to be acceptable evidence since there is nothing to "tie-in" the receipt with the particular document allegedly submitted.
